Function Transformations and Symmetry

The first well-documented postal system was in ancient Rome, where mail was carried by horsedrawn carriages and ox-drawn wagons. The US Postal Service delivers approximately 200 billion letters and 1 billion packages each year. Most businesses use both public and private mail systems to ship products to their customers. You will use graphs of equations to determine the effect of shipping costs on the total cost of purchasing machine tools.

Symmetry and Odd/Even • p. 387

9.4 Machine Parts Solving Equations Graphically • p. 395

9.1 Shifting Away Vertical and Horizontal Translations

Objectives

In this lesson, you will:

- Translate graphs of functions vertically and horizontally.
- Write equations for translated functions.

Key Terms

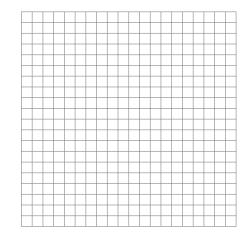

- vertical translation
- horizontal translation

Problem I Moving On Up!

1. Graph each linear function on the grid shown.

c.
$$y = x - 5$$

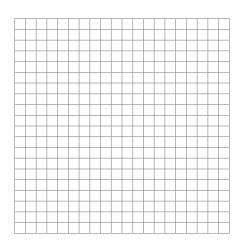

2. Graph each absolute value function on the grid shown.

a.
$$y = |x|$$

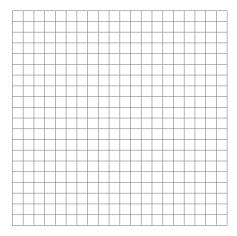

b. $y = |x| + 5$
c. $f(x) = |x| - 5$

9

3. Graph each quadratic function on the grid shown.

a. $y = x^2$ **b.** $y = x^2 + 5$ **c.** $f(x) = x^2 - 5$

4. In Questions 1 through 3, part (a) is a basic function. What operation is performed to each basic function to result in the equations in parts (b) and (c)?

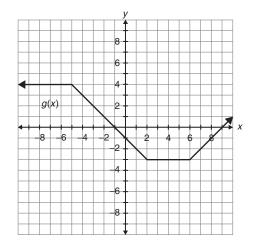

372 Chapter 9 • Function Transformations and Symmetry

5. Describe how the graph of f(x) + k is formed from the graph of f(x).

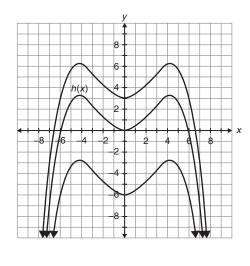

A vertical translation of a graph is a shift of the entire graph up or down.

- **6.** The graph of a function g(x) is shown. Sketch the graph of
 - **a.** g(x) + 2

7. The graph of the function h(x) is shown. Write a function in terms of h(x) for each vertical translation shown.

© 2009 Carnegie Learning, Inc.

Problem 2 To the Left, to the Right!

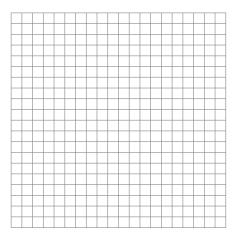

1. Graph each quadratic function on the grid shown.

a.
$$f(x) = x^2$$

b.
$$y = (x + 5)^2$$

c. $y = (x - 5)^2$

2. Graph each absolute value function on the grid shown.

a.
$$y = |x|$$

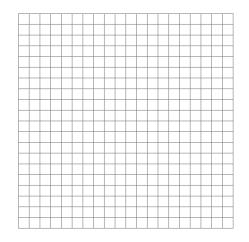

b. $y = |x + 5|$

c.
$$f(x) = |x - 5|$$

3. Graph each square root function on the grid shown.

a. $y = \sqrt{x}$ **b.** $y = \sqrt{x + 5}$

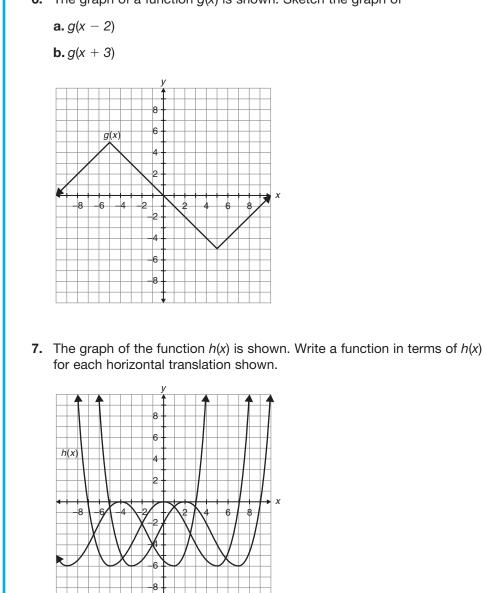

c.
$$f(x) = \sqrt{x - 5}$$

- **4.** In Questions 1 through 3, part (a) is a basic function. What operation is performed on each basic function to result in the equations in parts (b) and (c)?
- **5.** Describe how the graph of f(x h) is formed from the graph of f(x).

A **horizontal translation** of a graph is a shift of the entire graph to the left or to the right.

6. The graph of a function g(x) is shown. Sketch the graph of

Be prepared to share your methods and solutions.

9.2 Expanding, Contracting, and Mirroring Dilations and Reflections

Objectives

In this lesson, you will:

- Dilate graphs of functions.
- Reflect graphs of functions.
- Write equations for dilated and rotated functions.

Key Terms

- dilation
- reflection
- line of reflection

9

Problem I Dilating

- 1. Graph each absolute value function on the grid shown.
 - **a.** f(x) = |x|
 - **b.** g(x) = 2|x|
 - **c.** h(x) = 5|x|

© 2009 Carnegie Learning, Inc.

2. Complete the table to calculate the rate of change from 0 to 1 for each function in Question 1.

| Function | Value at x = 0 | Value at $x = 1$ | Rate of Change |
|-----------|-------------------|------------------|----------------------------------|
| f(x) = x | f(0) = | <i>f</i> (1) = | $\frac{\Delta f(x)}{\Delta x} =$ |
| g(x)=2 x | g(0) = | <i>g</i> (1) = | $\frac{\Delta g(x)}{\Delta x} =$ |
| h(x)=5 x | h(0) = | h(1) = | $\frac{\Delta h(x)}{\Delta x} =$ |

3. Graph each quadratic function on the grid shown.

a. $f(x) = x^2$ **b.** $g(x) = 2x^2$ **c.** $h(x) = 3x^2$

| | | | | | | | | | | | | | | | |

4. Complete the table to calculate the average rate of change from 0 to 2 for each function in Question 3.

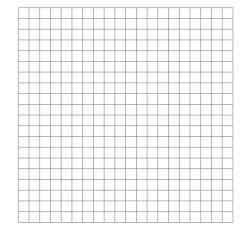

| Function | Value at x = 0 | Value at x = 2 | Average Rate of Change |
|-------------|-------------------|-------------------|----------------------------------|
| $f(x)=x^2$ | <i>f</i> (0) = | f(2) = | $\frac{\Delta f(x)}{\Delta x} =$ |
| $g(x)=2x^2$ | g(0) = | <i>g</i> (2) = | $\frac{\Delta g(x)}{\Delta x} =$ |
| $h(x)=3x^2$ | h(0) = | h(2) = | $\frac{\Delta h(x)}{\Delta x} =$ |

5. Graph each square root function on the grid shown.

a. $f(x) = \sqrt{x}$

b. $g(x) = 0.5\sqrt{x}$

c. $h(x) = 0.25\sqrt{x}$

6. Complete the table to calculate the average rate of change from 0 to 4 for each function in Question 5.

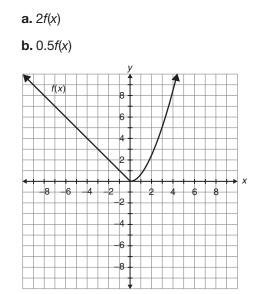

| Function | Value at $x = 0$ | Value at $x = 4$ | Average Rate of Change |
|----------------------|------------------|------------------|----------------------------------|
| $f(x)=\sqrt{x}$ | <i>f</i> (0) = | f(4) = | $\frac{\Delta f(x)}{\Delta x} =$ |
| $g(x) = 0.5\sqrt{x}$ | <i>g</i> (0) = | <i>g</i> (4) = | $\frac{\Delta g(x)}{\Delta x} =$ |
| $h(x)=0.25\sqrt{x}$ | h(0) = | h(4) = | $\frac{\Delta h(x)}{\Delta x} =$ |

- **7.** In Questions 1, 3, and 5, part (a) is a basic function. What operation is performed on each basic function to result in the equations in parts (b) and (c)?
- **8.** Describe how the graph of $a \cdot f(x)$ is formed from the graph of f(x).

A **dilation** of a graph is an increase or decrease of the rate of change by a constant amount.

9

9. The graph of the function f(x) is shown. Sketch the graph of

Problem 2 Reflecting

1. Graph each linear function on the grid shown.

a. f(x) = x + 5

b.
$$g(x) = -x + 5$$

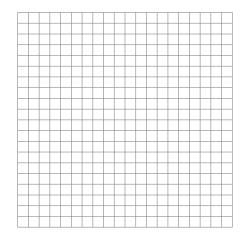

2. Evaluate the functions for each value.

a. f(2) =g(-2) =**b.** f(-2) =g(2) =**c.** f(5) =g(-5) =**d.** f(-5) =g(5) =

3. Graph each square root function on the grid shown.

a. $f(x) = \sqrt{x}$

b.
$$g(x) = \sqrt{-x}$$

4. Evaluate the functions for each value.

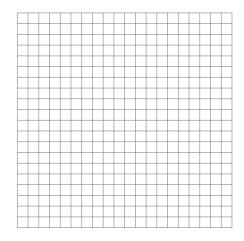

| a. <i>f</i> (1) = | <i>g</i> (-1) = |
|---------------------------|------------------|
| b. <i>f</i> (4) = | <i>g</i> (-4) = |
| c. <i>f</i> (9) = | <i>g</i> (-9) = |
| d. <i>f</i> (16) = | <i>g</i> (-16) = |

© 2009 Carnegie Learning, Inc.

5. Graph each cubic function on the grid shown.

a.
$$f(x) = x^3$$

b. $g(x) = (-x)^3 = -x^3$

6. Evaluate the functions for each value.

| a. <i>f</i> (1) = | <i>g</i> (-1) = |
|---------------------------|-----------------|
| b. <i>f</i> (2) = | g(-2) = |
| c. <i>f</i> (-3) = | <i>g</i> (3) = |
| d. <i>f</i> (-2) = | <i>g</i> (2) = |

- **7.** In Questions 1, 3, and 5, can you write g(x) in terms of f(x)? Explain.
- **8.** In Questions 1, 3, and 5, what do you notice about the graphs of f(x) and g(x)?
- **9.** If the ordered pair (x, y) is on the graph of f(x), then what point must be on the graph of f(-x)?

A **reflection** of a graph is the mirror image of the graph about a line. The line that the graph is reflected about is the **line of reflection.**

10. What is the line of reflection for the graphs in Questions 1, 3, and 5?

Problem 3 More Reflecting

1. Graph each linear function on the grid shown.

a.
$$f(x) = x + 5$$

b.
$$g(x) = -x - 5$$

- **5.** In Questions 1 and 3, can you write g(x) in terms of f(x)? Explain.
- **6.** In Questions 1 and 3, what do you notice about the graphs of f(x) and g(x)?
- **7.** If the ordered pair (x, y) is on the graph of f(x), then what point must be on the graph of f(-x)?
- 8. What is the line of reflection for the graphs in Questions 1 and 3?

Problem 4 Reflecting Twice

1. Graph the following square root functions using technology.

a. $f(x) = \sqrt{x}$

b.
$$g(x) = -\sqrt{-x}$$

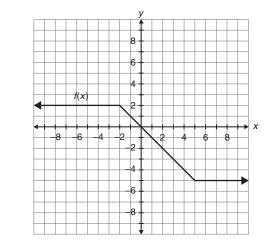

2. Evaluate the functions for each value.

a. f(1) =g(-1) =**b.** f(4) =g(-4) =**c.** f(9) =g(-9) =**d.** f(16) =g(-16) =

- **3.** Can you write g(x) in terms of f(x)? Explain.
- **4.** What do you notice about the graphs of f(x) and g(x)?
- **5.** If the ordered pair (*x*, *y*) is on the graph of *f*(*x*), then what point must be on the graph of *g*(*x*)?
- 6. The graph of *f*(*x*) is shown. Sketch the graph of

a.
$$g(x) = f(-x)$$

b.
$$h(x) = -f(x)$$

© 2009 Carnegie Learning, Inc.

Be prepared to share your methods and solutions.

9.3 Mirroring! Symmetry and Odd/Even

Objectives

In this lesson, you will:

- Describe the symmetry of functions.
- Classify functions as odd and even.

Key Terms

- even function
- odd function

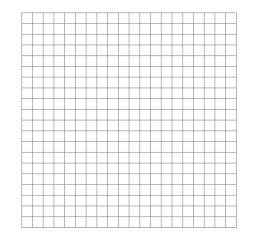

9

Problem I Symmetry

- 1. Graph each quadratic function on the grid shown.
 - **a.** $f(x) = x^2$ **b.** $g(x) = x^2 - 6x + 8$

c.
$$h(x) = x^2 + 6x + 8$$

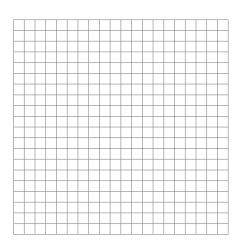

2. For each function in Question 1, identify the vertex, *y*-intercept, *x*-intercept(s), and line of symmetry.

| Function | Vertex | y-Intercept | <i>x</i> -Intercept(s) | Line of Symmetry |
|-----------------|--------|-------------|------------------------|------------------|
| $f(x)=x^2$ | | | | |
| $g(x)=x^2-6x+8$ | | | | |
| $h(x)=x^2+6x+8$ | | | | |

3. Graph each absolute value function on the grid shown.

a.
$$f(x) = |x|$$

b. $g(x) = |x + 2| - 3$
c. $h(x) = |x - 5| + 3$

4. For each function in Question 3, identify the vertex, *y*-intercept, *x*-intercept(s), and line of symmetry.

| Function | Vertex | y-Intercept | x-Intercept(s) | Line of Symmetry |
|--------------------|--------|-------------|----------------|------------------|
| f(x) = x | | | | |
| g(x)= x+2 -3 | | | | |
| h(x) = x - 5 + 3 | | | | |

5. Graph each cubic function on the grid shown.

a. $f(x) = x^3$

b.
$$g(x) = x^3 - 1$$

c.
$$h(x) = x^3 - 4x$$

| | | | | | | | | | | | | | | | | |
| | | | | | | | | | | | | | | | | |
| | | | | | | | | | | | | | | | | |

6. For each function in Question 5, identify the *y*-intercept, *x*-intercept(s), and line of symmetry.

| Function | Vertex | y-Intercept | x-Intercept(s) | Line of Symmetry |
|-------------------|--------|-------------|----------------|------------------|
| $f(x)=x^3$ | | | | |
| $g(x) = x^3 - 1$ | | | | |
| $h(x) = x^3 - 4x$ | | | | |

- **7.** What do you notice about the vertex and the line of symmetry for each function in Questions 1 through 6?
- **8.** What do you notice about the distance between the *x*-intercepts and the line of symmetry for each function in Questions 1-6?

9. Identify the equation of the line of symmetry, if it exists, for each graph shown.

b. *g*(*x*)

c. *h*(*x*)

10. Describe the result of reflecting a symmetric graph about its line of symmetry.

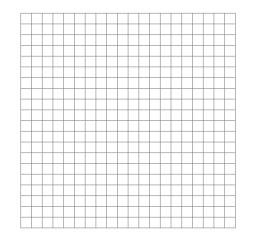

© 2009 Carnegie Learning, Inc.

Problem 2 Odd and Even Functions

1. Graph each function on the grid shown.

a.
$$f(x) = x^2$$

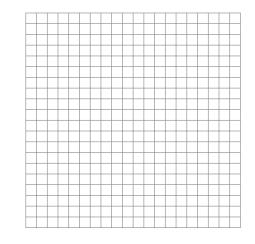

b.
$$g(x) = x^3 - 4x$$

2. Graph each function on the grid shown.

a.
$$h(x) = x^4 - 5x^2 + 4$$

b.
$$k(x) = x^5 - 5x^3 + 4x$$

3. Which functions in Questions 1 and 2 are symmetric about the *y*-axis?

- **4.** Describe the result of reflecting the graphs of the functions from Question 3 about the *y*-axis.
- 5. Evaluate the functions used in Questions 1 and 2 for each value.
 - **a.** *f*(1) = f(-1) =**b.** *f*(4) = f(-4) =**c.** *f*(6) = f(-6) =**d.** f(x) =f(-x) =**e.** *h*(1) = h(-1) =**f.** h(2) = h(-2) =g.h(5) =h(-5) =**h.** h(x) =h(-x) =
- **6.** If a function is symmetric about the *y*-axis, what is true about f(x) and f(-x)?

An **even function** is a function such that f(x) = f(-x) for all values of x. Even functions are symmetric with respect to the y-axis.

7. Describe the result of reflecting the graphs of g(x) and k(x) about the *y*-axis and then about the *x*-axis.

8. Evaluate the functions used in Questions 1 and 2 for each value.

a.
$$g(1) =$$

 $g(-1) =$
b. $g(3) =$
 $g(-3) =$
c. $g(2) =$
 $g(-2) =$
d. $g(x) =$
 $g(-x) =$
e. $k(1) =$
 $k(-1) =$
f. $k(3) =$
 $h(-3) =$
g. $k(2) =$
 $k(-2) =$
h. $k(x) =$
 $k(-x) =$
9. What do you notice about $g(x)$ and $g(-x)$? About $k(x)$ and $k(-x)$?

An **odd function** is a function such that f(x) = -f(-x) for all values of x.

10. Classify each function in Questions 1 and 2 as even or odd.

- **11.** The portion of the graph of f(x) to the right of the *y*-axis is shown. Sketch the portion of the graph to the left of the *x*-axis if
 - **a.** The function is an even function.

b. The function is an odd function.

Be prepared to share your methods and solutions.

9.4 Machine Parts Solving Equations Graphically

Objective

In this lesson, you will:

 Solve equations algebraically and graphically.

Key Terms

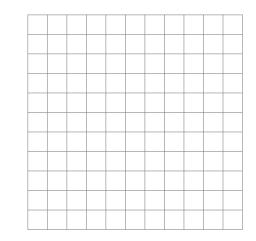

- point of intersection
- consistent
- inconsistent
- identity

Problem I Machine Parts

A company sells a machine part for \$15 with a fixed shipping charge of \$25 for any number of parts. Another company sells the same part for \$16 with a shipping charge of \$1.50 per part.

- **1.** Define variables for the independent and dependent quantities. Then write equations for the total cost of an order from each company.
- 2. Graph the equations from Question 1 on the grid shown.

- 3. Does it make sense to connect the points of each graph? Explain.
- **4.** Identify the slope and *y*-intercept for each function. What do the slope and *y*-intercept mean in terms of the problem?

- **5.** An order consists of 10 machine parts. Calculate the cost from each company. Which company provides a lower total cost? Explain.
- **6.** An order consists of less than 10 machine parts. Which company provides a lower total cost? Explain.
- **7.** An order consists of more than 10 machine parts. Which company provides a lower total cost? Explain.

A **point of intersection** of two graphs is a point that both graphs have in common. The ordered pair of the point of intersection satisfies the equations representing the graphs.

The point of intersection can be calculated using tables, graphs, or equations.

- Number of Cost from Cost from Machine Parts **Company A Company B** Parts Х 1 2 3 4 5 6 7 8 9 10 11 12 13 14
- 8. Complete the table shown.

15

- 9. Use the table of values to determine the point of intersection. How is the intersection point shown in the table?
- **10.** Can you always use a table to determine a point of intersection? Explain.
- **11.** Use the graph from Question 2 to determine the point of intersection. How is the intersection point shown on the graph?

- **12.** Can you always use a graph to determine a point of intersection? Explain.
- **13.** Use the equations to solve for the point of intersection algebraically.

14. Can you always use the equations to determine a point of intersection? Explain.

Problem 2 Solving Equations Graphically

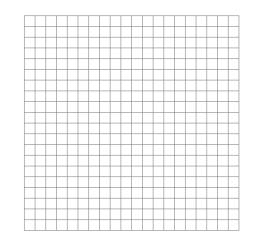

The methods that you used in Problem 1 to determine the point of intersection can also be used to solve a single equation. To solve a single equation, define a function equal to the left side of the equation and a function equal to the right side of the equation. The *x*-coordinate of the point of intersection is the solution to the equation.

1. Consider the quadratic equation $x^2 = 5x - 4$. Define the function f(x) equal to the left side of the equation and g(x) equal to the right side of the equation.

f(x) = g(x) =

- **2.** Use a table of values to determine the point(s) of intersection of f(x) and g(x). What is the solution to the equation $x^2 = 5x 4$?

3. Use a graph to determine the point(s) of intersection of f(x) and g(x). What is the solution to the equation $x^2 = 5x - 4$?

4. Compare the solutions using a table of values and the solutions using a graph. What do you notice?

5. Solve the quadratic equation $x^2 = 5x + 3$ using a table of values and a graph.

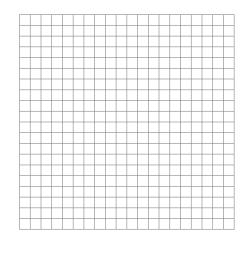

a. Define the function f(x) equal to the left side of the equation and g(x) equal to the right side of the equation.

$$f(x) = g(x) =$$

b. Table of values:

| x | |
|------|--|
| -2 | |
| -1.5 | |
| -1 | |
| -0.5 | |
| 0 | |
| 0.5 | |
| 1 | |
| 1.5 | |
| 2 | |
| 2.5 | |
| 3 | |
| 3.5 | |
| 4 | |
| 4.5 | |
| 5 | |
| 5.5 | |
| 6 | |

c. Graph:

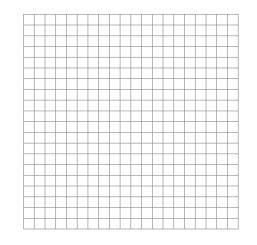

© 2009 Carnegie Learning, Inc.

Two equations are **consistent** if the graphs of the two equations have at least one point of intersection. Two equations are **inconsistent** if the graphs of the two equations do not have a point of intersection.

- **7.** Solve the cubic equation $x^3 + 2x^2 x 2 = (x + 1)(x 1)(x + 2)$ using a graph.
 - **a.** Define the function f(x) equal to the left side of the equation and g(x) equal to the right side of the equation.

$$f(x) = g(x) =$$

b. Graph:

© 2009 Carnegie Learning, Inc.

An **identity** is an equation that is true for all values of x. An identity has an infinite number of solutions. The graphs of the left and right sides of an identity are identical.

In Problem 2 Question 5, you were not able to determine exact solutions to the equation $x^2 = 5x + 3$. Technology, such as a graphing calculator, can be useful to determine more accurate solutions.

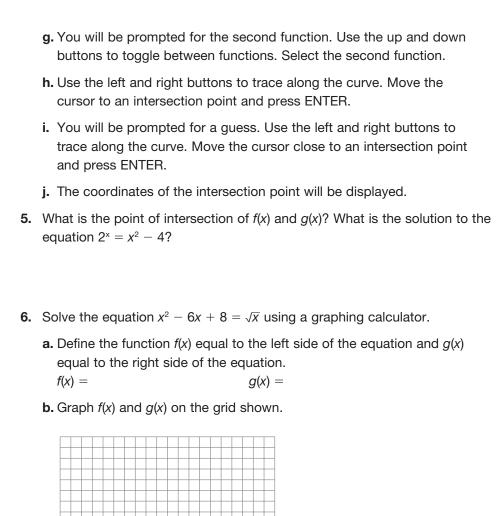

1. Consider the quadratic equation $2^x = x^2 - 4$. Define the function f(x) equal to the left side of the equation and g(x) equal to the right side of the equation.

$$f(x) = g(x) =$$

2. Graph f(x) and g(x) on the grid shown.

| | | | | | | | | | | | | _ | |
|---|---|---|---|-------|---|------|------|---|-------|-------|---|---|---|
| | | | | | | | | | | | | | |
| | | | | | | | | | | | | | |
